Grand Teton & Yellowstone National Parks

Much of Grand Teton National Park was ranch land before it became a park. This horse in front of the Teton Range is part of one of the few remaining ranches in the park.

Grand Canyon of the Yellowstone

This view of the Lower Yellowstone Falls and the Yellowstone River from Artist Point illustrates well how the point got its name. The yellows in the rock have always looked painted to me.

Trumpeter Swans on Christain Pond

This pair of Trumpeter Swans routinely nest on Christain Pond. The Trumpeter Swan is the largest native North American bird, if measured in terms of weight and length. They were heavily hunted in the 19th century, and were largely believed extinct by 1900. By 1932, 69 of these birds had been documented in the region around Yellowstone. Although not officially on an endangered species list today, they are still quite rare with something like 1500 birds migrating to or living in the continental US.

Teton Range over Jenny Lake

The Grand Tetons have been described as having no foothills. There is basically a valley with a few lakes on its edge, and then the mountain range starts straight up from the valley edge.

Merganser in the LeHardy Rapids

This Merganser in the LeHardy Rapids of the Yellowstone River was getting quite a work out. It would swim upstream through what is mostly white water, dive completely under the water to feed, and then emerge a couple hundred feet downstream to start the process of swimming upstream again. It repeated this routine 10 times or so while we were there.

Castle Geyser

Castle Geyser (in the same geyser basin as Old Faithful) erupts for the better part of a half hour when it goes off. In between eruptions as it is here, it still gives off a good plume of steam, and allows a good view of the tiny terrances around it that its runoff has created over the years.

Juvenile Bald Eagle

Juvenile bald eagles look very much like golden eagles. As best as I can tell, however, this is a 2nd year juvenile bald eagle. It was perched near Oxbow Bend, a wildlife-rich area of the park that most visitors know only for its landscape views.

Lower Yellowstone Falls

If one is willing to take Uncle Tom's Trail down into the Grand Canyon of the Yellowstone during mid-day, you can be rewarded with a spectacular view of the Lower Yellowstone Falls and a nice rainbow in its mist. The only catch is that this trail consists of 328 steps down, which means climbing back up those 328 steps at an elevation of about 8,000 feet.

Terraces by Grand Prismatic Spring

From the air, Grand Prismatic Spring looks dominantly blue. From the ground, what dominates is the huge set of terraces formed by little rimstone dams created from minerals in the runoff. The hot water near the spring creates red and orange bacteria mats. As the water cools farther from the spring, you get the darker browns seen here.

Mount Moran reflected in Oxbow Bend

Personally I remember Oxbow Bend for all the wildlife I saw around it, especially all the birds. However, the dawn light on Mount Moran with its reflection in Oxbow Bend is the classic view most tourists know (at least those who get up early enough to see it).

Bald Eagle

It was only 4 years ago that I remember even seeing my first bald eagle in the wild. Thus I always consider myself fortunate when I get a decent glimpse of one. I found there was a family of bald eagles living by Oxbow Bend, and this one was cooperative enough to fly right past me.
