

2014

Death Valley and the Desert Southwest

Before it became a national park, most people who came to Death Valley were miners hoping to get rich. Leadfield was one such town, where many people came based on fraudulent advertising of the great copper and lead to be found. In April 1926, 1749 lots were laid out to form the town. By August 1926 a post office opened to support about 300 residents. By February 1927 the post office closed and the town largely shut down. Not much remains today except for a handful of corrugated metal buildings that have a view of the colorful mountains. (3/21/2013, Titus Canyon Road, Death Valley National Park, CA)

Colorful Mountains

Zion National Park is well known for its very colorful sandstone mountains, but those mountains aren't limited to Zion. Much of Utah contains similar mountains without the crowds of the national park, especially in and around Grand Staircase-Escalante National Monument.

Desert Iguana

Although many people think of deserts as lifeless, the reality is they have a lot of wildlife that has adapted to the harsh conditions. The desert iguana seen here was living at the edge of some sand dunes. These large lizards have bodies 10-16 inches long, and a tail typically about 1.5 times the length of the body.

Red Hoodoos

Although Bryce Canyon contains the best known collection of hoodoos in Utah, that is not the only place they are found. Nearby Red Canyon contains a concentration of deep red formations not commonly found in Bryce.

Toadstools

Most of Grand Staircase-Escalante National Monument is accessible only by dirt road, and the roads are largely impassible following thunderstorms. The set of formations called the Toadstools, however, are accessible from a short hike just off of the paved highway.

Yellow-bellied Marmot

With much of the park above 10,000 feet, the summer is short and cool at Cedar Breaks National Monument. This yellow-bellied marmot was making use of the warm sun on the rocks while he had the chance.

Sand Pipe

Given its name, you would expect Kodachrome Basin State Park to be best known for its vivid colors. The reality, however, is that mid-day the colors in much of the park are rather muted compared to many of the other parks in Utah. What does stand out at Kodachrome Basin is its collection of sand pipes, the chimney-like formations that were formed by sediments pushing up through ancient springs. As you near sundown, however, the muted reds of mid-day combine with the red sunlight to make the more vivid reds much of Utah is known for.

East Mitten

Monument Valley is filled with rock spires called monuments, many of which have been given names. Two are named West Mitten and East Mitten (seen here), as they look like mittens (with thumb on the left and the 4 fingers on the right).

View from Sunset Point

We visited Utah during one of the wetter monsoon seasons in recent history, and all the clouds from the thunderstorms meant we didn't see many sunsets. The weather was cooperative, however, on the evening I visited Sunset Point, as some holes in the clouds allowed patches of sunlight to break through the clouds.
